

# INVENTORY REDUCTION SALE!

## Univex—3/4" & 7/8" Indexable End Mills

- High performance end mill for square shoulder and slotting of steel, stainless steel, and non-ferrous materials
- High positive axial rake angles provide quiet and smooth cutting action
- High positive ADHX 09 inserts for increased chip evacuation
- Insert grade selection, see pages 84–92 of the Milling Tools and Inserts catalog

## EBT—5/8"–1-1/4" TwinCut Ball Nose Roughing Mills

- Secure and precise pockets for accurate repeatability
- Pressed chip breaker style insert, with exclusive TwinCut negative geometry
- Features a negative axial rake angle combined with positive chip groove geometry for smooth cutting action
- Inserts used in EBT TwinCut ball nose copy mills for roughing applications
- Inserts can be used in right hand or left hand cutter bodies
- Stable insert cross section for heavy feed rates
- Pressed chipbreaker form
- Inserts offers 2 indexes
- Insert grade selection, see pages 84–92 of the Milling Tools and Inserts catalog

## ECT R12—1"—1-1/4" TwinCut Copy End Mills

- Exclusive TwinCut 12mm Round Inserts
- End Mill copy cutter for copy, face, and contour milling applications requiring long overall length
- Insert grade LC225T, a P25 substrate with PVD TiAlN coating, designed for die and mold materials under 32 Rc
- Insert grade selection, see pages 84–92 of the Milling Tools and Inserts catalog

## EMZ90—3/4" Aluminum End Mill

- Designed exclusively for high speed milling of aluminum alloys, copper alloys, and plastics
- Used for face milling, slotting, shoulder milling, and deep cavity work
- Capable of ramping and plunge milling
- Insert grade selection, see pages 84–92 of the Milling Tools and Inserts catalog

## FMT45— 8" & 10" TwinCut Face Mills

- First choice milling cutter for heavy duty face milling of alloy steels up to 32 Rc
- Features ramp milling capabilities
- Inserts designed for depth of cuts up to .400"
- Insert grade selection, see pages 84–92 of the Milling Tools and Inserts catalog

## HSS Roughing and Finishing End Mills

- End Mills offered in Fette's exclusive HSS cobalt material.
- Available Types: N, NR, HR, W, NF, NVT, and WF.
- Type N: End Mills, multi-flute = 30° R. H. spiral, rake angle = 11°, raised lands, designed for a wide range of universal applications in materials having medium strength and hardness, such as: carbon, and alloy steel case hardened, and tempered steels up 32 Rc.
- Type NR: End Mills, knuckle type, designed with relief ground, = 25° R.H. spiral, = 11° rake angle, round chip-breaker profile; for rough machining of low to medium-hardness steels, mainly long chipping materials, up to 27 Rc, can be used in titanium alloys and high temperature alloys.
- Type HR: End Mills, helix angle = 30°, rake angle = 7°, fine tooth knuckle type for roughing applications for materials of high tensile strength up to 32 Rc. For example case hardening steels, heat treatable steels, alloy tool steel, and hardened and tempered non-ferrous metals, high temperature alloys, also cast iron and grey iron.
- Type W: End Mills, center cutting 2-3 flute, helix angle = 40° R.H. spiral, rake angle = 22°, designed for machining of soft, tough and/or long chip producing materials, such as aluminum, copper alloys.
- Type NF: End Mills, helix angle = 30°, rake angle 11°, Truncated type end mill for roughing applications in materials of medium strength up to 32 Rc. For example case hardening and heat treatable steels, non-ferrous metals, also can be used in cast iron metals, and grey iron.
- Type NVT: End Mills, multi-flute, helix angle = 25° R.H spiral, = 8° rake angle. Designed with a wide land, ground radial relief and staggered relief ground chip breakers, specially suited for finishing operations with a high rate of chip removal. Producing at the same time excellent surface quality. For structural, case hardening and tempered steels up to 35 Rc.
- Type WF: End Mills, 3 flute, helix angle = 40°, R.H. spiral, 22° rake angle. Designed for long chipping materials such as aluminum and copper alloys, mild steels and preferred program cut is climb milling.
